

ASSIGNMENT 2:

ARRAY OF OBJECTS:

/*Array of Objects-It stores multiple objects of same class.

Useful when you want to manage a list or group
of similar objects.

this keyword - It refers to the current object inside the class.

Consider the class City having variable Name and Population.
Implement a program to display details of five different cities.

*/

```
import java.util.*;
```

```
class City{
```

```
    String name;
```

```
    long population;
```

```
    City(String n,long p){
```

```
        this.name=n;
```

```
        this.population=p;
```

```
    }
```

```
    void display() {
```

```
        System.out.println("City: " + name);
```

```
        System.out.println("Population: " + population);
```

```
        System.out.println();
```

```
    }
```

```
}
```

```
public class Assignment2 {
```

```
    public static void main(String[] args){
```

```
        Scanner sc=new Scanner(System.in);
```

```
        City[] c=new City[5];
```

```
        for(int i=0;i<5;i++){
```

```
            System.out.println("Enter the name and population of the city:");
```

```
            String name=sc.nextLine();
```

```
            long population=sc.nextLong();
```

```
            sc.nextLine();
```

```
            c[i]=new City(name,population);
```

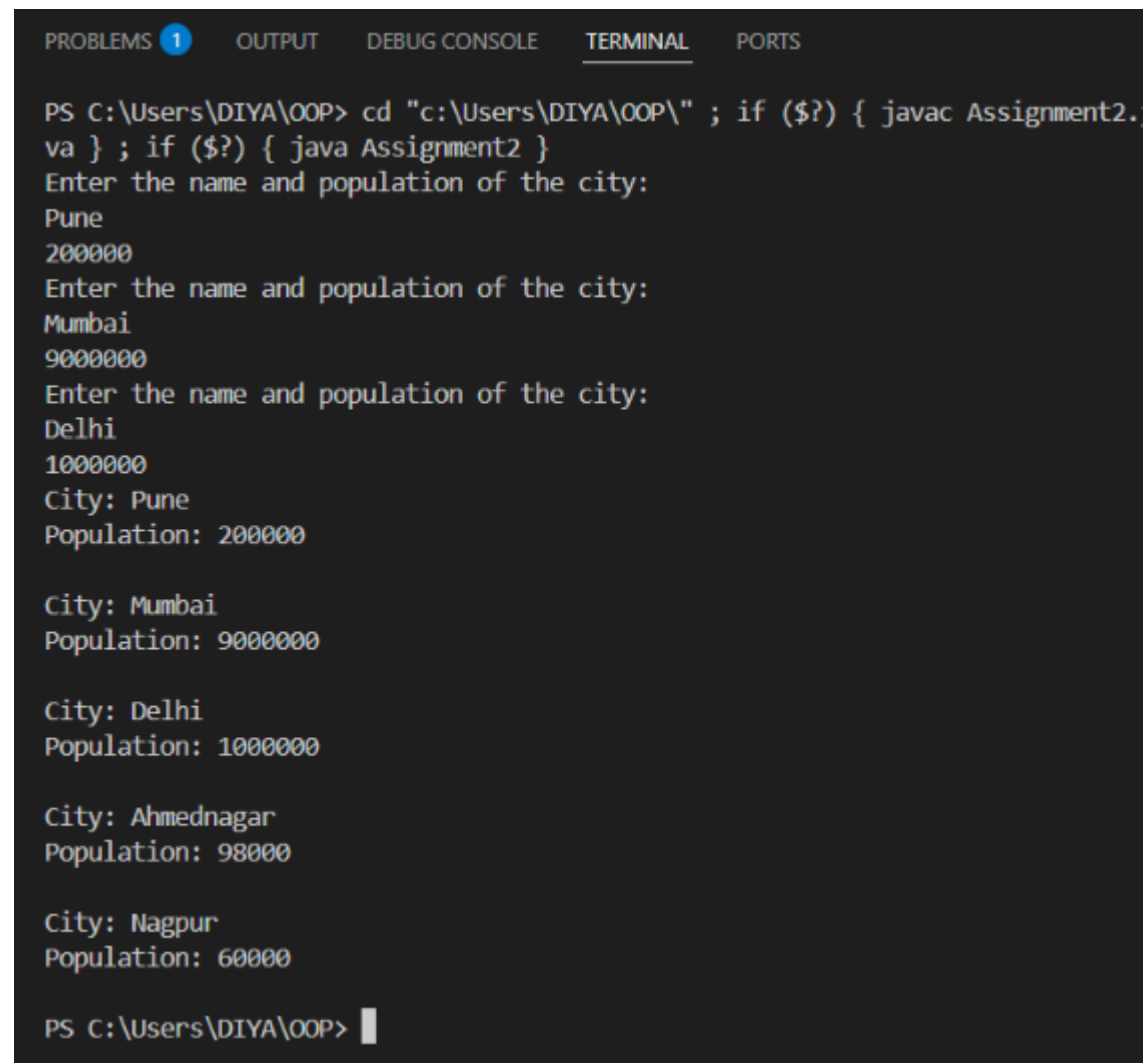

```

    }
    c[3]=new City("Ahmednagar",98000);
    c[4]=new City("Nagpur",60000);

    for(int i=0;i<c.length;i++){
        c[i].display();
    }
}
}

```

OUTPUT:

The screenshot shows a terminal window with the following content:

```
